X, Surat | 2010 - 2011

Completed in first attempt with 76%

PROJECTS

Modd.io

A Web App which would allow users to play different multiplayer games as well as creating them (without any prior knowledge to coding) and making it live so that other users can play that game. It's front end is built using a combination of React + EJS and the back end is built using NodeJS.

Coordinate

Web App developed using MEAN stack which helps in assigning and managing tasks to subordinate employees.

Rangers

Web App developed using MEAN stack (AngularJS v1.5) which helps in managing the delivery process of cash/coin bags to various Ranger's clients.

JumpPush Server

An Angular Meteor web App which helps in integrating services like Email and Push notification to an existing Mobile/Web App.

PewDiePie vs T-Series

Flutter based mobile application which shows live subscriber counts for PewDiePie and T-Series it also allows users to share screenshot of current subscriber count and it also features a dark mode.

PewDiePie vs T-Series Lite

Lite version of PewDiePiew vs T-Series, this is also a Flutter based mobile application which shows live subscriber counts for PewDiePie and T-Series but if has less features, this was my submission for Flutter's create contest.

Smart copy (Android application)

Mobile application which keeps record of all copied texts and the user can access them using floating window.

Smart copy (Web application)

MERN based web app companion for SmartCopy android app to sync items copied in your phone to web and access them seamlessly from any device.

Smart copy (Web application with Firebase)

Web application which uses Firebase's Authentication, Firestore and FireStorage features with Firebase function to periodically delete unused files and uses React and Material UI in front end, the main goal of this project was to get familiar with Firebase.

Pinger

Mobile application which helps in getting immediate responses from other users by displaying call like screen with user specified message on it.

Chatzz

Chatzz is a Socket.IO and NodeJS based framework for chat application which offers basic functionalities like registering user for chat app, sending message, getting notifications about change in user status, change in message status (i.e. send and read).

Lost and Found

Lost and Found is MEAN2 based web app, it is place for people to post images of lost items that they've found in case the owner of those items is searching for those items, This app also has chat functionality (Chatzz framework) so that the owner can discuss place and time to get the their lost belongings back with the person who has uploaded the image.

File Manager

Basic file manager android app with additional feature of customizing the icons of different types of files and it also allows user to add other file extensions (like .c, .java) which other file managers cannot recognize.

Sudoku Game

Sudoku game created using J2EE (Swing) with Sudoku solver and functionality to save current game and load previously saved games.

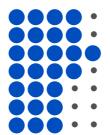

SKILLS

Web Development

React NodeJS ExpressJS Javascript Angular CSS MeteorJS

Database

MongoDB MySQL

Mobile Development

React Native Flutter Android (Native)
